

## Preparing HomeLoader for the SteamVR Home Environment (first start, only needs to be done once):

1. Download and unzip the latest HomeLoader version.
2. Start HomeLoader. It will show a welcome message with some general information's and after confirmation load the settings menu.

[Optional] Choose 'SteamVR' as Home App.

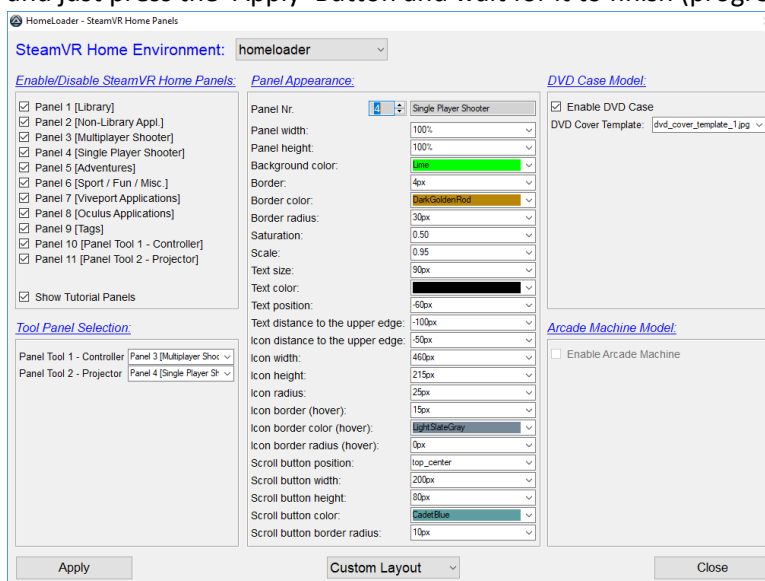

3. Press the 'Scan Steam Library first' button to open the HomeLoader Library. The Library will be empty and therefore it pop ups a message asking if you want to perform a scan. Do so and confirm the message.

4. Now the HomeLoader Library will be loaded and you can press the 'SteamVR Home Environment Settings' Button and HomeLoader will search for the HomeLoader SteamVR Environment File. **Be sure that it is already installed before you continue.**

5. If the HomeLoader SteamVR Workshop Environment File could be found then it will prepare it for use and load the SteamVR Home Environment Settings Window. Let everything like it is and just press the 'Apply' Button and wait for it to finish (progress bar).

6. Start SteamVR and open the HomeLoader Environment. It should now show the game panels with all your games.

7. [Optional] Now you can go back to HomeLoader and there you can customize the game panels and the different categories. It has 6 categories but the first two are fix and cannot be changed. Change the name of the last four categories by using the right mouse button over it and select "Change Category Name". There are three more panels and categories but they are also fix. These are the Viveport, Oculus and Tags categories. They are only available if activated in the settings menu. Use the 'Game Page Mode' Button to switch the HomeLoader Mode if you want to see these last three mentioned categories.

8. [Optional] Check and change the other Settings too. Use the right mouse click over Buttons to the context menu that shows more options.
